

DIMITRIS KONSTANTINOU

TOKENIZATION PRODUCT & ENGINEERING LEAD

Digital Assets | On-Chain Financial Products | Institutional Blockchain
Limassol, Cyprus | +357 96090943 | demis.konstantinou16@gmail.com
linkedin.com/in/demisk | github.com/demis1997

PROFILE

Technical product and blockchain leader with 8+ years of software engineering experience delivering institutional tokenization, digital asset and security-critical platforms. Led smart contract development for Deutsche Börse's D7 digital securities platform, contributing to infrastructure supporting more than EUR 10 billion in issuance, and designed modular digital asset capabilities for DTCC. Experienced translating business, regulatory and operational needs into platform workflows, technical specifications and delivery plans across engineering, architecture, security, auditors and institutional stakeholders. Combines hands-on blockchain depth with product thinking, stakeholder communication and technical delivery leadership.

CORE EXPERTISE

PRODUCT & DELIVERY

- Requirements gathering
- Product specifications
- User stories & workflows
- Prioritisation & roadmaps
- Stakeholder management
- Agile planning & delivery

TOKENIZATION

- Digital securities issuance
- Asset lifecycle management
- Compliance & transfer controls
- Identity & investor eligibility
- Settlement-related workflows
- On-chain investment products

TECHNICAL

- Solidity & EVM architecture
- ERC-1400 / ERC-3643
- Hyperledger Besu
- Smart contract security
- Custody & MPC
- AWS, Foundry, LayerZero

SELECTED PRODUCT EXPERIENCE

- Deutsche Börse D7 Digital Assets Platform | Lead Solidity Engineer (Contract via IntellectEU) 2024 - 2025 2023 - 2026
- Led the smart contract workstream for tokenized securities capabilities within Deutsche Börse's D7 digital post-trade environment.
 - Translated institutional digital securities requirements into smart contract specifications, platform workflows and delivery milestones with architects, auditors and stakeholders.
 - Designed regulated asset workflows covering issuance, investor positions, transfer restrictions, lifecycle events and settlement-related processes.
 - Developed a configurable digital securities framework based on ERC-1400 principles and contributed to infrastructure supporting more than EUR 10 billion in issuance.
 - Supported architecture decisions, testing strategy, security reviews, technical documentation and production delivery.
- DTCC Digital Assets Platform | Technical Lead / Lead Blockchain Engineer (Contract via IntellectEU) 2025 - 2026 2023 - 2026
- Designed modular institutional tokenization infrastructure enabling financial institutions to configure, issue and manage regulated digital assets on EVM-compatible networks.
 - Defined reusable platform components and workflows with architects, engineering teams and stakeholders.
 - Built factories supporting ERC-20, ERC-3643/TREX and ERC-721 assets, plus identity, eligibility, whitelisting, delegation and transfer-control capabilities.
 - Designed collateral, escrow, loan-account and attestation components for configurable financial-product workflows.
 - Led two Solidity engineers and contributed to technical specifications, architecture reviews, security processes and milestone delivery.

PROFESSIONAL EXPERIENCE

Lead Solidity Engineer | IntellectEU

Jul 2023 - Jun 2026

Remote / Europe

- Led blockchain delivery across tokenization, institutional finance, interoperability and digital asset infrastructure.
- Partnered with client stakeholders to convert business objectives and operational requirements into technical workstreams, specifications and architecture proposals.
- Coordinated engineers, architects, auditors and backend teams through planning, estimation, design reviews, implementation and delivery.
- Evaluated implementation options and communicated technical trade-offs, risks and dependencies to technical and non-technical stakeholders.
- Mentored three Solidity engineers, reviewed code and established engineering and security standards.
- Delivered Hyperledger Besu networks, LayerZero integrations and research initiatives across Polygon CDK/zkEVM and post-quantum cryptography.

Blockchain Security Engineer | Wise Wolves Group / The Vault

Oct 2024 - Jun 2026

Cyprus

- Designed institutional digital asset custody and transaction-authorization infrastructure using Coinbase MPC, threshold ECDSA and distributed approval workflows.
- Developed secure signing orchestration, key lifecycle, backup, recovery and approval controls for production custody use cases.
- Worked across security, infrastructure and product requirements, including threat modelling, architecture reviews and HSM evaluations.

Lead Blockchain Developer | Inverse

Sep 2022 - Jun 2023

Remote

- Led delivery of staking, NFT and AWS-backed blockchain services, coordinating smart contracts with backend and infrastructure components.
- Owned architecture decisions, implementation planning, reviews and production delivery for blockchain product features.

Smart Contract Auditor | Nethermind

Jul 2022 - Oct 2022

Remote

- Audited DeFi protocols, vaults, AMMs, MEV systems and Cairo-based applications using manual review, Slither, Echidna and fuzzing.
- Collaborated with engineering teams on vulnerability remediation and security improvements.

LEADERSHIP & PRODUCT DELIVERY

- Led initiatives involving engineering organisations with more than 50 contributors and directly mentored three Solidity engineers.
- Participated in discovery, planning, estimation, milestone management, architecture governance and stakeholder reviews across institutional projects.
- Able to bridge executive objectives, financial-product workflows and implementation details while maintaining a strategic platform perspective.

TECHNICAL & DOMAIN SKILLS

Product: Requirements discovery, product specifications, workflows, user stories, prioritisation, roadmaps, Agile delivery, stakeholder communication

Digital assets: Tokenized securities, issuance, lifecycle management, corporate actions, compliance controls, investor eligibility, custody, DeFi, liquid staking

Blockchain: Solidity, EVM, Foundry, Hardhat, OpenZeppelin, ERC-20, ERC-721, ERC-1155, ERC-1400, ERC-3643, ERC-4337, Hyperledger Besu, LayerZero, Polygon CDK/zkEVM

Security & infrastructure: Smart contract auditing, threat modelling, MPC, threshold signing, AWS, Docker, Linux, CI/CD

EDUCATION, AWARD & COMMUNITY

BSc Computing (Software Development) - Bath Spa University, 2015-2018

IBM Technology Award Recipient

Open source: Contributor to Slither, Optimism Bridge and projects in the Cairo, Aptos and Sui ecosystems.
